RevITup™ WebSentry Managed Internet Security Series

Complete visibility and control over web content, web applications and web threats

RevITup™ WebSentry is the first hosted solution to provide small and medium-sized businesses complete visibility and control over web content, web applications and web threats – Installed, monitored and managed by our expert staff.

5 Ways RevITup™ WebSentry Service Protects Your Network and Your Business

Bandwidth Optimization

Does your business have an application or a user that needs priority on the network? Then Bandwidth Optimization is what you need. Services like FTP, voice over IP, or VPN can be moved to the top of the list, while Internet radio and instant messaging can be moved to the bottom. Finally, you manage priorities on the Internet and optimize your productivity.
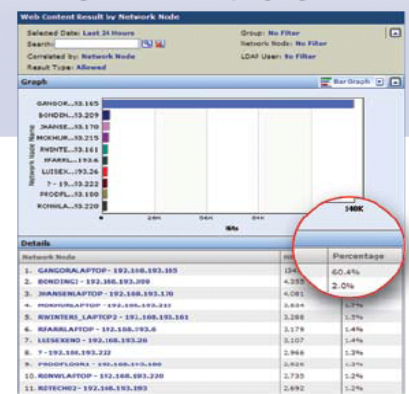

TOP USERS:
Identify which users are spending the most time browsing and see where they're going.

LOG INSTANT MESSAGES:
Protect your company by gaining visibility into instant message conversations – see who's chatting online and what they're saying.

Website Filtering & IM Management

Every month companies lose thousands of dollars of productivity to Internet abuse. If you don't believe it, simply put it to the test. Internet Monitoring will show you just how much you're paying employees to shop online, play fantasy football, stream YouTube and chat with friends on Instant Messenger.

SHAPE BY APPLICATION:
Control non-critical application traffic by shutting it down or scaling it back. Prioritize critical applications so they always run as fast as you need them to.

Internet Usage Reporting

Do you know which of your employees use the Internet the most or which applications are taking up the bandwidth? Are you getting the bandwidth you're paying for? Our weekly reports will answer all of these questions and more.

Spyware and Virus Blocking

Each day spyware and malware can make its way to your network. Some of it is innocent – most of it is not. Until now, you had to rely on scanning at the workstation level. RevITup™ WebSentry stops spyware and viruses at the edge of the network so machines don't get infected in the first place... saving you time, money and headaches.

Policy Management

Network policies vary by department, group, job function and even individual. RevITup™ WebSentry delivers all-in-one Internet policy management tools that allow us to help you set policies for application priority, content, time-of-day, threat and access policies and much more. Our policy management feature set lets you control Who, What, When and How your organization uses the Internet.

"The WebSentry is extremely easy to install and to learn to use. I can quickly pull reports and forward to our human resource department and department managers so that they can review the information and take necessary disciplinary action if needed. It has really eliminated the stress on our management staff because they no longer have to manually monitor employee activity now that we have a reliable device to do it for us."

William Graham, IT administrator Kirby-Smith Machinery

> **Initial Network Analysis and Optimized Configuration -** Once RevITup™ WebSentry is installed, you'll immediately have access to Internet traffic reports that show how users, applications and threats are impacting your network performance. We will configure RevITup™ WebSentry to prioritize mission-critical traffic and limit non-critical and detrimental activity.

> **Automated Reports -** Weekly updates on top bandwidth users, web abusers, application bandwidth loads and more. By scheduling these reports for regular delivery, you'll stay in on top of your internet security issues and identify problem areas.

> **Software and Hardware Maintenance:** RevITup™ WebSentry service means our trained engineers will monitor, maintain and manage your Network Composer so you can focus on your business.

> **Continual Internet Monitoring and Maintenance -** Proactively identify Internet connection by reviewing WebSentry reports. By approaching this managed security service strategically, we'll help prevent costly down-time, latency and possibly even litigation issues for your business.

> **Periodic Review of Bandwidth Consumption –** Assist in making resource decisions by showing exactly how bandwidth is being used.   RevITup™ WebSentry reports will show exactly how much bandwidth is used on your network and if upgrades are needed.
