

RevITup WebSentry™ Managed Internet Security Series

Total protection and control over web content, applications and threats | Monitored and managed 24x7 by our expert staff

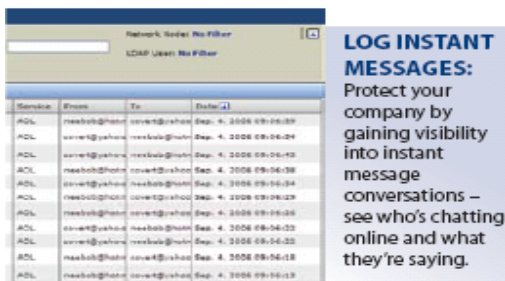

RevITup WebSentry™ is the first hosted solution to provide small and medium-sized businesses protection, visibility and control over web content, web applications and web threats.

5 Ways RevITup™ WebSentry Service Protects Your Network and Your Business

Bandwidth Optimization

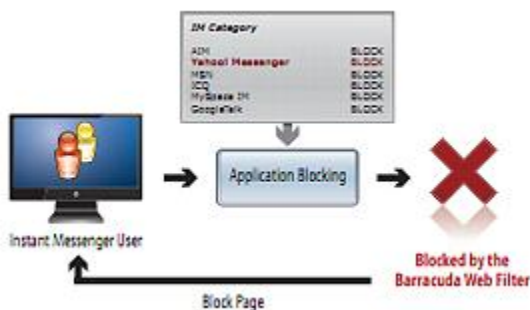

Does your business have an application or a user that needs priority on the network? Then Bandwidth Optimization is what you need. Services like FTP, voice over IP, or VPN can be prioritized while Internet radio and instant messaging can be moved to the bottom. Finally, you manage priorities on the Internet and optimize your productivity.

Website & Application Filtering

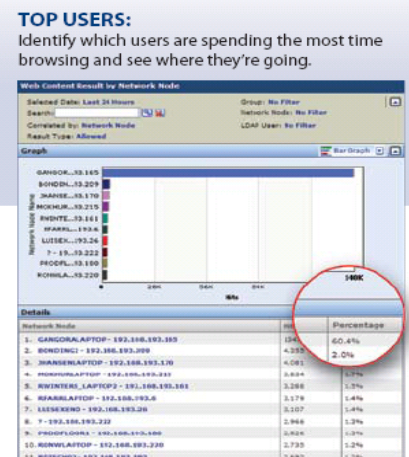

Every month companies lose thousands of dollars in productivity to Internet abuse. If you don't believe it, simply put it to the test. Internet Monitoring and

daily email reports will show you just how much you're paying employees to shop online, play fantasy football, stream YouTube and chat with friends on Instant Messenger.

Internet Usage Reporting

Do you know which of your employees use the Internet most or which applications are taking up the bandwidth? Are you getting the bandwidth you're paying for? Our weekly reports will answer these questions and more.

Spyware and Virus Blocking

On any day spyware and malware can make its way to your network and user PCs. Some of it is innocent – most of it is not. Until now, you had to rely on scanning at the workstation level. RevITup™ WebSentry stops spyware and viruses at the edge of the network so machines don't get infected in the first place... saving you time, money and headaches.

Policy Management

Network policies vary by department, group, job function and even individual. RevITup™ WebSentry delivers all-in-one Internet policy management tools that allow us to help you set policies for application priority, content, time-of-day, threat and access policies and much more. Our policy management feature set lets you control Who, What, When and How your organization uses the Internet.

"The WebSentry is extremely easy to install and to learn to use. I can quickly pull reports and forward to our human resource department and department managers so that they can review the information and take necessary disciplinary action if needed. It has eliminated stress for our management staff as they are no longer tasked with manually monitor employee activity now that we have a reliable device to do it for us."

~ William Graham,
IT administrator

Managed Internet Monitoring, Security and Performance (IMSP) Services Included in Monthly Fee:	✓	✓	✓

- **Initial Network Analysis and Optimized Configuration** - Once RevITup™ WebSentry is installed, you'll immediately have access to Internet traffic reports that show how users, applications and threats are impacting your network performance. We will configure RevITup™ WebSentry to prioritize mission-critical traffic and limit non-critical and detrimental activity.
- **Automated Reports** - Weekly updates on top bandwidth users, web abusers, application bandwidth loads and more. By scheduling these reports for regular delivery, you'll stay in on top of your internet security issues and identify problem areas.
- **Software and Hardware Maintenance:** RevITup™ WebSentry service means our trained engineers will monitor, maintain and manage your Network Composer so you can focus on your business.
- **Continual Internet Monitoring and Maintenance** - Proactively identify Internet connection by reviewing WebSentry reports. By approaching this managed security service strategically, we'll help prevent costly down-time, latency and possibly even litigation issues for your business.
- **Periodic Review of Bandwidth Consumption** – Assist in making resource decisions by showing exactly how bandwidth is being used. RevITup™ WebSentry reports will show exactly how much bandwidth is used on your network and if upgrades are needed.
